CSCE 190

Computing in the Modern World

Welcome!

Introduction

Robert Bailey

baileyrt@cse.sc.edu

Office: INNOVA 2247

Background:

- 17 years as a full-stack developer
- 10 years as team lead and intern hiring lead

My Family

Purposes of the class

Learn about CS, CE, CIS

Learn how to start a project / solve a problem (all but the coding) as a team

- Gain some “almost real-world” experience

Learn about career options in IT

Create a resume and prep for job search

Meet people in the department

Learn from mentors

General Plan

14 weeks, 1 hour each week

- Monday classes will lose Labor Day, Wednesdays will lose Thanksgiving

Something due every week (including this week)

- Large tasks are given 2 weeks, but a “draft” is the deliverable in the middle
- Recommendation: GET IT DONE IN CLASS!

Work as a team (4 members max, 3 members min)

- I know, teams stink. But they model real life, so get back to work!

Each person creates their own site linking to team efforts

Syllabus*

Grading clarification

8 simple assignments: Github account and site, problem statement, affinity diagram, persona, storyboard, sketch, cover letter, attend a career event

4 complex assignments: paper prototype, hi-fi prototype, final project*, resume**

40 points for simple, 60 points for complex = 100 points

*There’s no exam. 8 of the 12 assignments will form a portfolio. Finish and submit.

**Resume draft = 5 points, final version = 10 points

Assignment: Attend a Career Center Event

Open Blackboard

Navigate to Assignments

- 2 assignments are active; we'll cover the other one later

Link to register

- You can also attend something that doesn't require* registration

Submit some kind of photographic evidence (screenshot, photo, etc.)

Attendance clarification

Each week, we will complete part of a project in teams.

If you are unable to attend, you are responsible for contacting your team and coordinating outside of class.

Class time is active, working time. No need to find a common time to meet. I'm giving it to you for free.

Attendance is not mandatory for the course, but it is for your teammates (you owe it to them to be present and to participate).

If you don't like my style, watch the videos under "Course Content / Modules"

Class rules

No nuts, tree nuts

We will form groups as part of Week 2

- Email me if you need help joining a group
- Participation with your team is mandatory (just like real life)

Reach out to SDRC for any accommodations

We need to be able to communicate and collaborate. Discord, Slack, Teams, Other?

Email me: baileyrt@cse.sc.edu
Subject: “190 Section [X] vote”
Go ahead, I’ll give you 2 min.

Questions so far?

Let’s get started

First, the planning

You need to choose a username. Mine is CSE-baileyrt

- You may use your personal or school email
- You do NOT need to use “CSE” like I did (it can be any username you want)

In a minute, there are some important points:

- The repo name must match your username EXACTLY
- The “index.html” file name is case sensitive (e.g. not “Index.html”)
- Type the HTML code carefully (e.g. remember to close the tags)

Assignment: Create* a Github account, Pages

https://github.com/ (click “Sign Up”)

Create an account, skip the “What do you want to do first?” dialog

Mine is: https://github.com/CSE-baileyrt

Click “Create Repository”, name it [username].github.io, mark it Public

Blue box: click “creating a new file”, name it “index.html”

Content of index.html*

```
<!DOCTYPE html>
<html>
  <head>
    <title>CSCE 190: [your name]</title>
  </head>
  <body>
    <h1>[your name]</h1>
  </body>
</html>
```

While that commits…

Click “Commit changes…”

Listen to me ramble about HTML and VS Code

Open the page [username].github.io and refresh until the 404 goes away

https://cse-baileyrt.github.io/

404

There isn't a GitHub Pages site here.

If you're trying to publish one, read the full documentation to learn how to set up **GitHub Pages** for your repository, organization, or user account.

cse-baileyrt.github.io

[your name]

Congratulations, you just began your journey to creating a code portfolio and a public website

Assignment 1 (Blackboard*)

We covered this in Lecture 1, in class. See the recording for details.

In the Course Content / Modules section, there's a link to a video on how to create a github site, if you prefer that.

Create your site and post a link to it here (submit it as a text entry).

Rubric:

1 point for the page loading (correct link)

1 point for your name displayed

1 point for custom text (showing your name)

1 point for repository

1 point for github profile

Next steps

Download Visual Studio Code

Create a new index.html file

Learn* more about HTML coding (w3schools is excellent)

Try stuff (break some eggs) on your local machine

Upload the finished file (drag-and-drop) to
https://github.com/[username]/[username].github.io/upload/main

Celebrate!

Questions?
